Git

Personal Project

text-to-motion
from scratch

- Working with AMASS dataset
 - Designed and implementing a diffusion-based neural network architecture
-

PROFIL

Software Engineer with 6+ years of experience designing complex software systems. Specialized in experimental architectures and system optimization. Strong experience working in production-critical environments, debugging complex systems, and improving reliability and performance of large-scale platforms. Passionate about R&D, system architecture, and emerging technologies across software and hardware ecosystems.

PROFESSIONAL EXPERIENCE

Senior Software Engineer Weda, Montpellier, France

May 2021 - Present

- Contributed to the evolution of a large-scale ETL pipeline handling high-volume medical data imports, with a strong focus on data integrity and compliance
- Contributed to frontend architecture evolution using multi-version Angular alongside legacy ASPX components
- Initiated and structured the first CI/CD pipelines, increasing deployment reliability and automation

Full-Stack Engineer (Sole Developer), 1001 Intérim'air, Montpellier, France June 2020 - November 2020

- Designed and shipped a cross-platform mobile app (iOS & Android) as sole engineer, using Ionic (Angular-based) with Firebase for auth and real-time sync

IT Hardware Technician – Techmatic Recycling Services Ltd, Dublin, Ireland July 2016 - December 2016

- Processed and certified data destruction on enterprise hardware for major tech clients (Facebook, Blizzard), in compliance with data security standards

EDUCATION

Epitech, Montpellier – Master, 2015 - 2020

계명대학교, 대구 (Keimyung University, Daegu), South Korea – Exchange Year, 2018
